LSS File No 162-07

Letter No. 7776 dated the 26th. June 1907 from the Senior Surgeon and Sanitary Commissioner with the Government of Mysore to the Chief Engineer in Mysore.

In returning herewith the papers in connection with the drainage of Robertsonpet sent with your No. 227 dated the 10th. January 1907, I have the honor to observe:-

1. That the project does not appear to be complete as there are certain areas which are not included in it.

2. There is no provision to improve the existing flat bottomed stone drains with a view to facilitate the flow of sewage in them and making the flushing efficient.

3. It is doubtful if the water supply of Robertsonpet would be extended sufficiently to be of use in flushing the drains.

4. The proposed method of disposal does not appear to be suitable for dealing with slaughter house refuse which consists mainly of undigested grass and other vegetable matter.

5. The size of the pipe sewer leading from the slaughter house viz 4 does not appear to be large enough in spite of the dilution of the refuse suggested by the flush tank.

6. The angle of junction of sewers at places marked x in the plan appears to be faulty.

7. The site at which the maceration tank is proposed to be built is likely to be under water in the rainy season unless the drainage project is complete. At present the subsoil water there is very near the surface.

8. No ventilating shafts appear to be shown on the plan.

9. At one or two important points pointed out personally to Mr. Bhore it would be advisable to have air inlets also.

"C o p y".
